

Using the Sources When Writing the Dissertations

Sometimes, students as well as scholars are afraid of designing and completing new project, one of the most difficult in their turbulent student life, one of the longest during their short period of study, and one of the most important as well. Why are so many people afraid of the writing assignment? Why so many students afraid of dissertations? Apparently, they have too many questions and too few answers.

Let us answer some of them.

First

One should remember that it is not always necessary to make your own research. Certainly, when you are assigned to undertake some research in your instructions than you should perform it. In the majority of cases, however, you can use available statistical data.

Second

The data mentioned can be found relatively easily. There is a plethora of publishing sources that contain the data you are interested in. Even, if you do not have statistical data on some specific problem (for example media coverage of the war in Iraq), you have the possibility to conduct the research and analyze available publishing sources.

Third

Apart from the resources mentioned there are other sources that can be researched. For example, if you are assigned to complete the assignment on geography, then you should visit library to conduct your research, or visit geographical society, if your research pertains to some regional topic.

Fourth

Both quantitative and qualitative data can be used in your research. Certainly, the type of the research that should be used depends on the type of your assignment. Needless to say, it is imperative to use quantitative methods in the writing assignments of technical subjects, but even in this case you should indicate why the particular method has been chosen. When you need to back your research up with statistical data, the use of quantitative research is indispensable. Qualitative data is frequently used when you would like to find out the psychological or social reasons of a particular event or trend. You can either use your own data, or use data from other sources.

Fifth

In your dissertation project you are expected to analyze your data, both the one collected by yourself from your own research or from other sources. You should answer such questions as why does this trend continue, what makes it grow or fall, why is it changing? You could explain how particular methods are applicable to the process that you research. One should reveal one's own understanding of the vital elements of the concept mentioned and their influence on the process that you research.

Six

Your dissertation can be written on some literature. In this case it would be a literature-based paper. If you are assigned to conduct the research on particular book, you should emphasize some important topics of the book, which in your opinion make this book distinctive. This type of dissertation requires some research on literature criticism; however make sure that you use literature criticism, after you have read a book.

Certainly, we have answered only part of the questions that concern students. Undoubtedly some questions still remain unanswered. If you would like to learn more about dissertations and the steps that should be taken to complete them, you are more than welcome to visit <http://www.bestessays.com>.
